

CANDIDATE ACQUISITION DIRECTIVE

CANDIDATE ACQUISITION DIRECTIVE - EXCERPT

FROM: ONI Section III DATE: 2517
RE: Colonial counter-insurgency asset program

Background: Colonial administration risk projections (Section III, 2516 revision) indicate escalating probability of coordinated insurrection across Outer Colony settlements within the decade. Standard counter-insurgency response is judged insufficient to prevent large-scale civil conflict.

Proposal: A small, genetically and cognitively screened cohort of colonial minors will be identified, removed from their family units without notification, and trained from early childhood toward specialized counter-insurgency service. Removal will be concealed at the family and colonial-administration level through substitute case closure (see Medical Annex, CAIRN record 102).

Designation for the cohort, pending formal program naming: SPARTAN-II.

This directive is not intended to be permanent doctrine. It is intended to be survivable doctrine, for as long as the alternative is worse.
